Addressible

OVER 30 MILLION ADDRESSES

What is Addressible?

Addressible adds detailed physical locations to Royal Mail address lists. It allows you to plan your service more accurately, price with greater confidence, minimise abandoned baskets and make auto-fill fields more user-friendly. Addressible delivers all the detail you need to understand exactly the location of a Royal Mail address.

Addressible is a new dataset created by emapsite containing over 30 million addresses, 1.8 million post codes and 1.4 million business names.

It combines Royal Mail Postcode Address File (PAF), Multi-Residence File, Alias File and Welsh Language addresses with location coordinates (X/Y and Lat/Long), topographical identifier (TOID) and unique property reference number (UPRN).

Addressible includes all addresses at a location via the Unique Multiple (Residence) Point Reference Number (UMPRN) from the Royal Mail Multi-Residency file which identifies each of the occupants behind the same letterbox. In this regard, a UMPRN is the 'child' of the UDPRN which we have linked to the UPRN. It is supplied as a dataset in CSV file format for ingestion into customer-owned and maintained geospatial systems.

Why use Addressible?

ADDRESSIBLE TECHNICAL DETAILS

Coverage: England and Wales

Delivery: 4 x .csv files

Subscription: 12 months

Refreshed: Quarterly

Lead time: Same day

Pricing: Annual licence fee (users or transactional)

Addressible is ideal for anyone wishing to verify a property address during their internal business process workflow, for example when calling up a customer's account page, and for populating an externally facing webform in support of customer self-service activities. Businesses are able to implement internal activities more cost effectively and correctly provide a property address for increased confidence, speed, accuracy and convenience.

It also enables organisations who use Royal Mail address lists to benefit from knowing the actual location of the addresses they use for routing, logistics, sales and marketing targeting or pricing and analytics.
