

Web Feature Service

The challenge

How can you access detail about assets and location more easily and resolve the administrative burden of managing geospatial data. Our Web Feature Service (WFS) is the answer.

Web Features Service (WFS) gives you instant access to geographic information at the most detailed level – property-level data, points, lines, polygons, and text. emapsite's WFS is compliant to Open Geospatial Consortium (OGC) standards.

Paying for only what you use, WFS gives you a better – more efficient – way to use location information in your business. WFS is ideal for teams with GIS software and apps analysing business data and searching for insight, without the headache of hosting, managing and maintaining geospatial data.

Our solution

- A secure online service that gives you access to core datasets: OS MasterMap™, OS AddressBase Premium, HMLR National Spatial Dataset, and HMLR Commercial and Corporate Ownership Data.
- Features or values of feature properties are retrieved from the underlying data store. These can be studied using GIS software applications to extract new meaning from business data to enhance decision making and reveal new business opportunities.
- Resolves the overhead and administrative burden of managing geospatial data
- Ensures the quality and currency of data, so you can pass that confidence on to customers (and reduce errors for your teams).

Web Feature Service

Why choose this product?

WFS lets you focus on your core activities and decision-making processes, business-wide, while we deal with the IT overhead of managing complex geospatial data.

- **OS MasterMap™**
- **OS AddressBase**
- **HM Land Registry National Spatial Dataset**
- **Supported by QGIS, Cadcorp SIS9, and ESRI ARCGIS (up to 500 features per request)**

Estate managers: understand your land and property in more detail, use the insights to make more efficient plans and manage your estate more effectively.

Asset managers: get the detail you need to make more informed decisions about repairing, maintaining, and planning your assets – utilities, property, or stock.

Utility companies: understand strengths and weaknesses in your planning, and get insights on threats and opportunities to cut costs and reduce risks.

Pricing

WFS is a subscription service with a tariff priced for the number of feature requests you wish to make. Each request returns up to 1,000 features.

We recommend using the free trial period to gain insight and identify the tariff allowance that is most appropriate for your situation. We will always ensure that your tariff is suitable and may advise you from time-to-time to select a more appropriate level (up or down).

Sustainable Tech tariff:

We are looking for an early adopter customer to work with us to develop a fully carbon offset service.
